## Saber StormPro Basic Single Sump Pump Basement Drainage System

The Saber StormPro Basic Single Sump Pump Basement Drainage System is essential for basement waterproofing and optimized basement drainage. This pre-packaged system is designed for efficiency, optimized water drainage, long term life, and lower cost.

The drainage products in this package include:

- 1, Saber Single Sump Pump Pit with clear, gasketed lid
- 1, StormPro 1/3 HP sump pump with fixed or adjustable float switch
- 1, Clear Check Valve

### Saber Single Pump Sump Pit

The Saber single pump sump pit is molded from high quality, impact resistant polyethylene. This tough, seamless, corrosion proof construction together with the system's innovative-patented design and proven capabilities has set the standard for the future in basement drainage. Can be used for indoor or outdoor applications. The Saber Sump Pit will not fail under soil shifting or ground heaving conditions. The Saber Sump Pit reduces soil moisture content because it is a subsurface drainage system. The Saber Sump Pit is like no other drainage system available today. It is efficient, affordable and guaranteed for life. 12" tank extensions are available to lower pit to required depth. Design to work with the StormPro sump pumps.

This engineered pit incorporates side wall tank perforations drilled at optimal placement and density to allow ground water to flow freely into the pit and minimizing sediment infiltration. Can be used for sub-grade applications inside or outside at any depth (tank extensions). Pit Dimensions: 18" wide (top) x 24" wide (bottom) x 24" tall

### StormPro 1/3 HP High Efficiency Pump

These dependable high output submersible pumps are ideal for use in heavy duty basement sump and utility applications. StormPro pumps use high efficiency motors that cost less to operate and discharge more water than standard pumps. Stainless steel and cast iron construction ensure years of reliable operation. The adjustable verticle float switches are ideal for reducing the pump cycle in deeper pits or where a high water table exists. Works well with the Saber sump pit.

### Clear Check Valve

This clear PVC check valve allows for easy inspection of basement water flow and valve operation. Full flow design with quite offset flapper prevents backflow for maximum pumping capacity. Design contributes to less frequent sump pump cycling prolonging the life of the motor. Ideal for new installation or as a replacement for virtually any sump pump and basement water drainage application. Two sizes - 1 1/2" and 2" diameter pvc piping.
